# Number Island

## Directions

### Object of the game:

Each number island has plenty of "land" for everyone! Be the player to grab the most "land" (circle the most numbers), and win!

### Materials:

- \*2 different color markers/colored pencils
- \*Number island game.

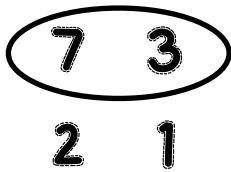

## How to play:

Players take turns grabbing land by circling numbers that make, or add up to, the total listed on the board. For example, if the board says "Make 10", the numbers circled must equal 10.

## Rules:

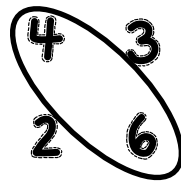

1) The numbers circled must be adjacent numbers. They can be side by side (horizontal), up and down (vertical), or diagonal. You can circle combinations including 2 or more numbers.

### Side by Side

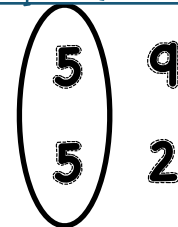

7	3
2	1

### Diagonal

4	3
2	6

### Up and down

5	9
5	2

2.) Once numbers have been circled, it is out of play and cannot be circled again.

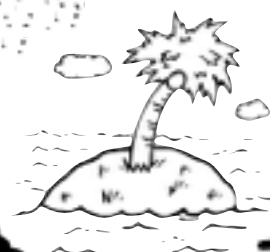

3.) The game ends when there are no more possible combinations to circle.

4.) At the end, each player counts up how many numbers they have circled, whoever has the most, wins!
